

CURRICULUM VITAE

Self-assessment

My name is Xia Song, a junior student in Wuhan University. I used to major in medicine for one semester, but later I found it was not my interest. Later I changed my major and went to study in electronic information school. Last year fortunately, I was chosen to be a member of a new established artificial intelligence class and it aroused my enthusiasm to this field. Professor Jiang Hao is my academic advisor and every summer or winter vacation I would get the chance to do some researches in his lab and it provided me with some valuable experience about handling the problem in artificial intelligence. In my spare time I would like to take part in some activities such as student union and youth volunteers. At the same time, I applied for a national college student research project with my roommates and I was lucky to be the group leader. Also I engaged in some competitions which improved my practical skills. Now I have learned TOEFL for a few months and in the future I want to pursue graduate study in America.

Personal information

name: Xia Song **gender:** man **mailbox:** 2016302180154@whu.edu.cn
age: 21 **telephone number:** 13732258264

Education background

Wuhan University 2016.09-2020.06 communication engineering

Scientific research and competition experience

I have taken part in three scientific researches:

1. The national college student scientific research
In this project, we want to use the laser to transmit energy to the UAV(Unmanned Aerial Vehicle), we are going to track the flying trail of the UAV and keep charge for it.
2. The Smart Lighting project in professor Jiang Hao's lab
This project is mainly about Smart home and we took part in an innovation tournament in our school.
3. Internet Advertising Investment Analysis project in professor Jiang Hao's lab
In this project, I used the signaling data of Jinhua and Beijing to analyze the human behavior patterns when they surf the internet. And then we conclude some advice for the internet advertising.

I have taken part in those competitions

1. Mathematical contest in modeling (got second prize)
2. Innovation tournament in Wuhan University (got third prize)
3. Communication optimization contest

Campus life

In the freshman year, I took part in the students union and the youth volunteers. The main work is to handle some problems of students in our school and do some voluntary work. When I was a sophomore I went to Qinghai province to help the children in the village. I like to play soccer when at leisure and I used to be a member in the soccer team. In the past three years I had learned some courses about artificial intelligence such as machine learning, data mining, the introduction of artificial intelligence. In the next vacation I want to do some scientific researches abroad. Thus I can accumulate some pre-experience about the study in other countries.
